

Fulmarus glacialis

Fýll- Fulmar - Eisstormvogel - Havhest

Akið varlega á Suðurlandsvegi frá Skógum að Múlavísi!

Í ágúst og september er fjöldi fýlsunga sem yfirgefa hreiður á klettasyllum norðan Suðurlandsvegur. Þeir eru ófleygir en svífa af syllunum. Ef vindar eru óhagstæðir lenda þeir oft á vegum og geta ekki flogið burt þótt bíll nálgist.

**Drive carefully between Skógar and Hotel Katla, east of Vík.
You don't want to kill a fulmar chick!**

During August and September fulmar chicks glide out from cliff sills north of main road 1 in Southern Iceland. They often land on the road where death is almost unavoidable as they are not able to fly off the road even if cars approach.
